

Aztex Equipment Liftwell Screens

- > *Lightweight for ease of handling and transport*
- > *Meets required safety standards*
- > *Built tough to take the knocks on site*
- > *Available for hire*

Aztex Liftwell Screens give you peace-of-mind on site. They weigh only 40 kg — over 40% lighter than conventional steel screens, while being structurally strong and robust.

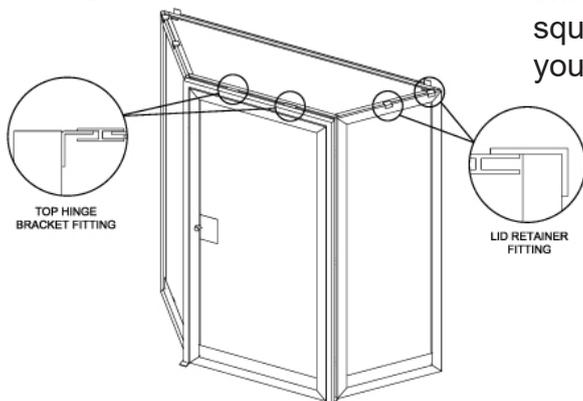

These robust units cover openings 2.3 m x 2.1 m (h x w), just like conventional screens. They fold and stack flat like conventional screens. They comply with Australian Standards and the National Standard for Plant, with comprehensive WHS information on the front of the door, unlike conventional screens which do not have this.

Built for tough Aussie conditions. Aztex Liftwell Screens feature a fully riveted aluminium screen frame with no sharp mesh edges to avoid injuries. The door frame is made of steel and is very strong. Unlike conventional screens the door opens fully to 180° for better access.

Aztex Liftwell Screens are easy to collapse for transport and storage.

The locking striking plate is extended to allow for out-of-square installation. This save you a lot of hassle on site.

These robust, long lasting units are available for hire. They're available at very competitive rates. Ring us for a FREE quote.

All necessary WHS information are highly visible and are located on the front door.

The lid slides into position and interlocks with the supporting frame for better security.
